11:30 - 11:35	Closing Remarks

About the Event

Indonesia and Vietnam are experiencing rapid industrial growth, accompanied by increasing pressure on natural resources, waste management systems, and overall environmental performance of industrial zones. In response, both countries have expressed a growing interest in transforming conventional industrial parks into Eco-Industrial Parks (EIPs) in line with international standards, including those developed by UNIDO.

The event will give first-hand insights into the current status of this transition by presenting results of case studies conducted in three industrial parks in Indonesia and Vietnam. Learn more about business and cooperation opportunities for German and European technology providers and investors in the field of circular economy. With direct input from industrial park operators in Indonesia and Vietnam, the event will showcase key transformation needs, priority investment areas, and potential entry points for German solutions in waste management, resource efficiency, and (waste)water treatment.

The event is organized by the Partners in Transformation Desk Southeast Asia at the Agency for Business and Economic Development (AWE) on behalf of the German Federal Ministry for Economic Cooperation and Development (BMZ), in close collaboration with the German RETech Partnership, the German Water Partnership (GWP), and DIHK – Chambers for GreenTech.
